

CORPORATE PROFILE

About Us

Established in 1976, our talents behind Tecsia Lubricants deliver a diverse line of innovative lubricants to meet an ever increasing range of industrial specifications. With deep industry knowledge, we have the right people, skills and experience to help companies enhance the performance and life of their equipment, reduce total lubrication cost, and stay ahead of the competition.

Tecsia Lubricants designs and markets a comprehensive line of premium leading-edge lubricants ideal for use in a diverse range of industrial applications such as bearings, gears, chains, hydraulics, electronic mechanisms, compressors, turbines and food processing equipment. Every products selected by our lubrication specialist are engineered and tested to meet or exceed the toughest performance standards.

Our highly experienced lubrication specialist works closely with customers, offering professional advice on sound lubrication practices, proper lubricant selection, equipment trouble-shooting, and other lubrication services that help plants last longer with more reliability while remaining in top condition.

Our Mission

We strive to satisfy our customers by providing them with **quality products** and **solutions** that meet their requirements.

What We Do

We designed to suit your diverse needs and lower your "Total Cost of Lubrication" – draws from the following services:

Our **expertise services** utilize the application knowledge of our engineers to deliver documented performance benefits through system and component inspections, lubrication training, troubleshooting, root cause failure analysis, and detailed lubrication instructions.

Our **lubrication testing services** help you achieve peak performance by providing advance warning of abnormal conditions that could contribute to equipment or lubricant degradation.

We deliver **turnkey solutions** that improve lubricants reliability, lengthen re-lubrication intervals, minimise unscheduled downtime, and reduce maintenance costs.

CORPORATE PROFILE

Turnkey Lubrication Solutions

Our services and comprehensive product range allow you to extend equipment life, reduce overall maintenance cost, consolidate your supply chain and provide technical support. At Tecsia Lubricants, we aim to provide turnkey solutions for our customers, offering necessary knowledge and the exact solution for each application.

Specialty Lubricants

Tecsia Lubricants provides the range of industrial premium lubricants to meet the individual requirements of all our customers. The range consists of an extensive line of high-performance lubricating oils and greases. Every Tecsia's lubricants is tested to exceed the toughest performance standards.

Brand	Country	Applications
Anderol	USA	Industrial and military equipment
Brugarolas S.A.	Spain	Industrial equipment
Tacbecon	USA / Netherland	Industrial equipment and consumer products
Radco	USA	Heat transfer fluid applications

CORPORATE PROFILE

Certifications

International Organisation for Standardisation

Certification No. 160316

The cornerstone of Tecsia Lubricants Pte Ltd is the quality management system. The quality policy is taught to each and every employee and posted in several locations throughout the facility, along with the company mission statement and quality objectives.

Certification No. 190051

The quality management system has been certified to ISO 9001:2008 and ISO14001 (with Environment Management). This process-based approach links each activity and promotes continuous process improvement throughout the organization. Total customer satisfaction is the goal we strive to obtain. We provide assurance to management it is in control of the processes and activities that have an impact on the environment and to assure employees that they work for an environmentally responsible company.

Certified Lubrication Specialist Program

The Society of Tribologists & Lubrication Engineers standardises the body of knowledge which a lubrication specialist must possess, and certifies those individuals who can demonstrate expertise in critical areas of lubrication technology.

This expertise must also be very broad-based, covering not only knowledge of lubrication fundamentals, and lubrication of gears, bearings, seals, but also such diverse subjects as lubricant manufacture, lubricant analysis, metalworking, storage and handling, condition monitoring and reduction of consumption to name a few.

A Certified Lubrication Specialist can provide the best possible technical advice about lubrication problems, either in their own plant or with customers.
